ABOUT US

CATZ Industrial OPC is a specialized industrial services company. We provide mechanical works and equipment rental for asset owners and EPC contractors in Power, Energy, LNG, Oil & Gas, Marine, and Petrochemical facilities.

Our founder set up CATZ to give plant owners a contractor that brings engineering judgment to the work, uses specialist crews, and runs lean. He is a mechanical engineer with hands-on project experience in the same industries we serve, and he plans and supervises every scope directly.

As a One Person Corporation, CATZ makes decisions quickly, and the founder is directly accountable for the work. We draw on a pool of skilled, experienced craftsmen who are ready to mobilize, and we size crews, materials, and equipment to each project. We do not carry idle overhead, and clients get the savings.

MISSION

Mission

To protect and extend the life of our clients' critical assets through safe, quality-assured, and cost-efficient specialized services. Skilled people carry out the work under sound engineering, and we keep improving how it is done through technology and automation.

VISION

Vision

To become one of the most trusted and reliable specialized industrial contractor in the region, known for engineering discipline, safety, and on-time delivery.

CORE VALUES

Core Values

- **Safety first:** zero harm to people, assets, and the environment on every shift.
- **Accountability:** we own our scope, schedule, and results.
- **Fit-for-purpose engineering:** the right method and material for each service condition.
- **Efficiency:** lean execution and smart use of data and automation to cut wasted effort.
- **Quality:** work done right the first time, then inspected, and documented.

LEADERSHIP

CATZ is led by its Founder and General Manager, **Ferdinand Catulin II**, **Mechanical Engineer** with 16+ years experience in the industry, who personally plans, estimates and oversees every project.

Before founding CATZ, he managed international and local contracting companies, where he secured, executed and completed specialized industrial service contracts in the same disciplines CATZ now offers.

He built CATZ on that experience: winning work, running crews, meeting client HSE and QA/QC requirements, and closing out projects.

Ferdinand Catulin II
Founder & General Manager

LEADERSHIP

What the founder brings

- Mechanical engineering background applied to various industrial services disciplines.
- Direct experience with client specifications, ITPs, method statements and permit-to-work systems.
- Established relationships with skilled supervisors, foremen and craftsmen.
- Hands-on use of AI and automation for estimating, planning and reporting.

Ferdinand Catulin II
Founder & General Manager

SERVICES

CATZ provides mechanical works for plant maintenance, which is our core business, and equipment rental. Clients can hire us for either service or both.

Mechanical Works for Plant Maintenance

We carry out preventive, corrective, and shutdown/turnaround maintenance on the static and rotating equipment of operating plants. Our crews dismantle, inspect, repair, align, and reinstall pumps, compressors, valves, heat exchangers, vessels, and tanks.

SERVICES

Maintenance Types

Preventive Maintenance: Scheduled work done before equipment fails, at the intervals in the OEM manual or the client's maintenance plan. Typical tasks are lubrication and oil changes, strainer cleaning, gland packing adjustment, and checks on couplings, bearings, and bolt torque. We log vibration and bearing temperature readings and note seal leaks against each equipment tag, so the client can see a fault developing and plan the repair.

SERVICES

Corrective Maintenance: Repairs after a breakdown, or after operators or inspectors find a defect such as a leaking mechanical seal or a passing valve. Once the client has isolated the equipment and issued the permit, our crew traces the cause, repairs or replaces the failed parts, then reassembles and tests the equipment before handing it back. The job report records what failed and the probable cause.

Shutdown/Turnaround Maintenance: Planned outages in which a unit or the whole plant stops so that many items can be opened, repaired, and boxed up within a fixed window. Before the outage, we work with the client's turnaround team to settle the scope, prepare a work pack for each item, and plan manpower and tools against the schedule. During the shutdown we run extended shifts, install and remove blinds, report progress daily, and close out each item with signed test and inspection records before start-up.

SERVICES

Work Activities

- Dismantling
- Inspection
- Repair
- Alignment
- Reinstallation

SERVICES

Equipment we maintain

Rotating equipment is machinery with a shaft that turns continuously, driven by a motor, engine, or turbine. Static equipment has no continuously rotating parts; it holds, heats, cools, or controls the process fluid.

- Pumps
- Compressors
- Valves
- Turbines
- Heat Exchangers
- Boilers
- Pressure Vessels
- Storage Tanks

SERVICES

Equipment Rental

We rent out tools and construction equipment through our partner network, matched to each project's requirements. Every unit is inspected before delivery and handed over with a checklist, its third-party certificate, and a DOLE Permit to Operate where one is required. We can supply a certified operator with the equipment or brief the client's own operators on safe use.

INDUSTRIES WE SERVE

- **Power** - Boilers, turbines, HRSGs and steam lines
- **Energy** - Renewable and conventional energy facilities
- **LNG** - Cryogenic lines, storage tanks and process units
- **Oil & Gas** - Terminals, depots and process facilities
- **Marine** - Vessels and jetties
- **Petrochemical** - Process plants and refineries

WHY CATZ?

- Client queries get answered quickly without escalation, because the mechanical engineer who planned and estimated the job also oversees it.
- The mechanical fitters, pipefitters, welders, and riggers in our pool are skilled and experienced, and they have worked together on industrial projects.
- One decision-maker is accountable for the job, which keeps approval lines short, mobilization fast, and communication clear.
- We keep the company lean and asset-light. For each project we mobilize crews, materials, and equipment through vetted suppliers and rental partners, so no idle overhead goes into our prices.
- We utilize AI and automation for estimating, scheduling, and daily progress and QA/QC reporting, which gives clients faster quotes and real-time visibility of their jobs.
- The maintenance crew and the equipment it needs can both come from us, under one contract and one supervisor.

Send us a request for a quotation, a site assessment, or rental equipment, and we will respond within 24 hours.
